SpectrumHD

SpectrumHD | Etch ink

Vibrantz's Etch digital ceramic ink emulates the appearance of traditional sandblasted glass and enables custom design. Etch ink creates a semitransparent frosted effect on glass and is ideal for interior glass partitions that require privacy enhancement or light diffusion.

Etch ink provides a contemporary alternative to labor- and resource-intensive processes. It is also a sustainable and user-friendly solution for printing on glass.

SpectrumHD key features

- High chemical durability for exterior applications
- REACH compliant
- Lead and cadmium-free
- Suitable for standard tempering processes
- Extended nine-month shelf life
- Variable gloss and optical density depending on ink wet layer thickness
- Formulated for air and infrared drying
- Suitable for leading inkjet print heads of the industry
